

Clark Peng

San Jose, CA | cipeng@ucla.edu | [linkedin.com/in/clarkpeng](https://www.linkedin.com/in/clarkpeng) | github.com/clarkipeng | clarkipeng.github.io

EDUCATION

University of California, Los Angeles

B.S. in Computer Science (GPA: 4.0)

Los Angeles, CA

Expected June 2028

TECHNICAL SKILLS

Languages: Python, C++17/20, SQL, Bash, TypeScript, Mojo, C#

ML Systems: PyTorch, JAX, FSDP, FlashAttention, vLLM, SGLang, distributed training, GPU programming (CUDA/Mojo)

Systems / Infra: Linux, GDB, CMake, C++ STL, C++ concurrency, Docker, PostgreSQL, AWS, Azure, CoreWeave, Lambda Cloud

EXPERIENCE

Catapult (YC S26)

CTO

San Francisco, CA

2026 – Present

- Built and operated a multiplayer strategy benchmark that evaluated 19 frontier LLMs from 7 labs across 1K agent games, generating 257M tokens of reproducible, auditable gameplay evidence.

Camfer (YC S24)

Software Engineering Intern

San Francisco, CA

Aug 2025 – Dec 2025

- Scaled LLM post-training and mid-training for Qwen2.5-VL and Qwen3-VL using FSDP and multimodal sequence packing, increasing throughput 10x.
- Built a sharded synthetic-data pipeline that generated 600M+ tokens from 800K CAD parts and reduced preprocessing and tokenization from hours to minutes.
- Built asynchronous EC2 rollout system for model error correction and a 10,000+ line SolidWorks/Onshape replay layer that caught dozens of errors missed by integration tests.

UCLA NLP Group

Student Researcher

Los Angeles, CA

Oct 2024 – Present

- Co-authored **VideoPhy-2** (ICLR 2026; Best Paper, ICML 2025 WorldModel Workshop), a physical-commonsense benchmark for video generation.
- Optimized 30B MoE (3B active) routing-alignment training by packing teacher and student batches, reducing runtime and memory usage while achieving a 2x speedup.

Scale AI

Technical Intern

Los Angeles, CA

Nov 2024 – Aug 2025

- Authored 100+ expert-level solutions to problems rated 2000+ for LLM coding-evaluation datasets.
- Built 10+ deterministic Docker test environments for open-source Python repositories used in RLVR rubrics and autonomous coding-agent evaluation.

PROJECTS & AWARDS

Competitive Programming | ICPC Top 10, USACO Platinum

2021 – Present

- Placed Top 10 at the ICPC Southern California Regional; solved timed algorithmic problems across DP, geometry, graph theory, and game theory.

Kaggle Competitions | Top 1% Competitor, Top 100 Notebooks

2023 – 2025

- Developed a probability-density regression framework for event-boundary detection; methodology was adopted by top competitors and outperformed standard segmentation approaches on external datasets.
- Published 5+ gold-medal notebooks with 20k+ forks on model training, inference speed, and data augmentation.

Graphics Projects | C++, OpenGL, Unity

2022 – Present

- Built a custom C++/OpenGL 4D game engine with BVHs, Verlet sphere physics, and a custom shader; simulated 1M GPU slime agents at 120 FPS; built C++ raytracers for image rendering and audio propagation at 660k rays/min.

LEADERSHIP

UCLA ACM AI | President

Nov 2025 – Present

- Lead UCLA's largest AI organization (800+ members), managing 30 student leaders and a \$5k annual budget across research projects, ML hackathons, and collaborations with ICPC, Studio, Hack, and Cyber.
